

Project Plan

Mathieu Trottier

Allan Liu

Parm Johal

The above gantt chart describes the initial schedule of task for this project. By the 31st of January the system will run for one user. After that, the system efficiency will be improved by utilizing parallelization, caches, and load balancers. While everyone will have a general knowledge of all the parts of the systems, each member will have specializations. Mathieu will be responsible for the workload generator and the transaction server, Allan will be responsible for the web server and the web client, and Parm will be responsible for the database and the audit server.
